

This heatmap displays the relationship between various variables (rows) and eight categories (columns). The color scale ranges from dark purple (low) to bright yellow (high). The categories are labeled on the x-axis: H4, SNU738, NIMCG1, GI1, TM31, SW1088, HS683, and SW1783. The variables are listed on the y-axis, including numerous gene names and identifiers. The heatmap shows varying levels of expression or activity across the categories for each variable.
